Radius transport conditioned on the observed zero-leg measurement
Slope of Δln r/0.05 against e∥
Measured zero-leg radius (arcsec)
Simulation
Old mean-head 500/500
New plain 100/100
Slope of Δln r/0.05 against e∥
Measured zero-leg |ê|
RMSE of Δln r/0.05
Measured zero-leg radius (arcsec)
RMSE of Δln r/0.05
Measured zero-leg |ê|
1,120,160 matched galaxies; 40 held-out cases; true Re > 0.5 arcsec; both detected. Bars: case-bootstrap 1 SE.
Latents inferred from observed zero-leg values; this is a transport diagnostic, not independent forward closure.
