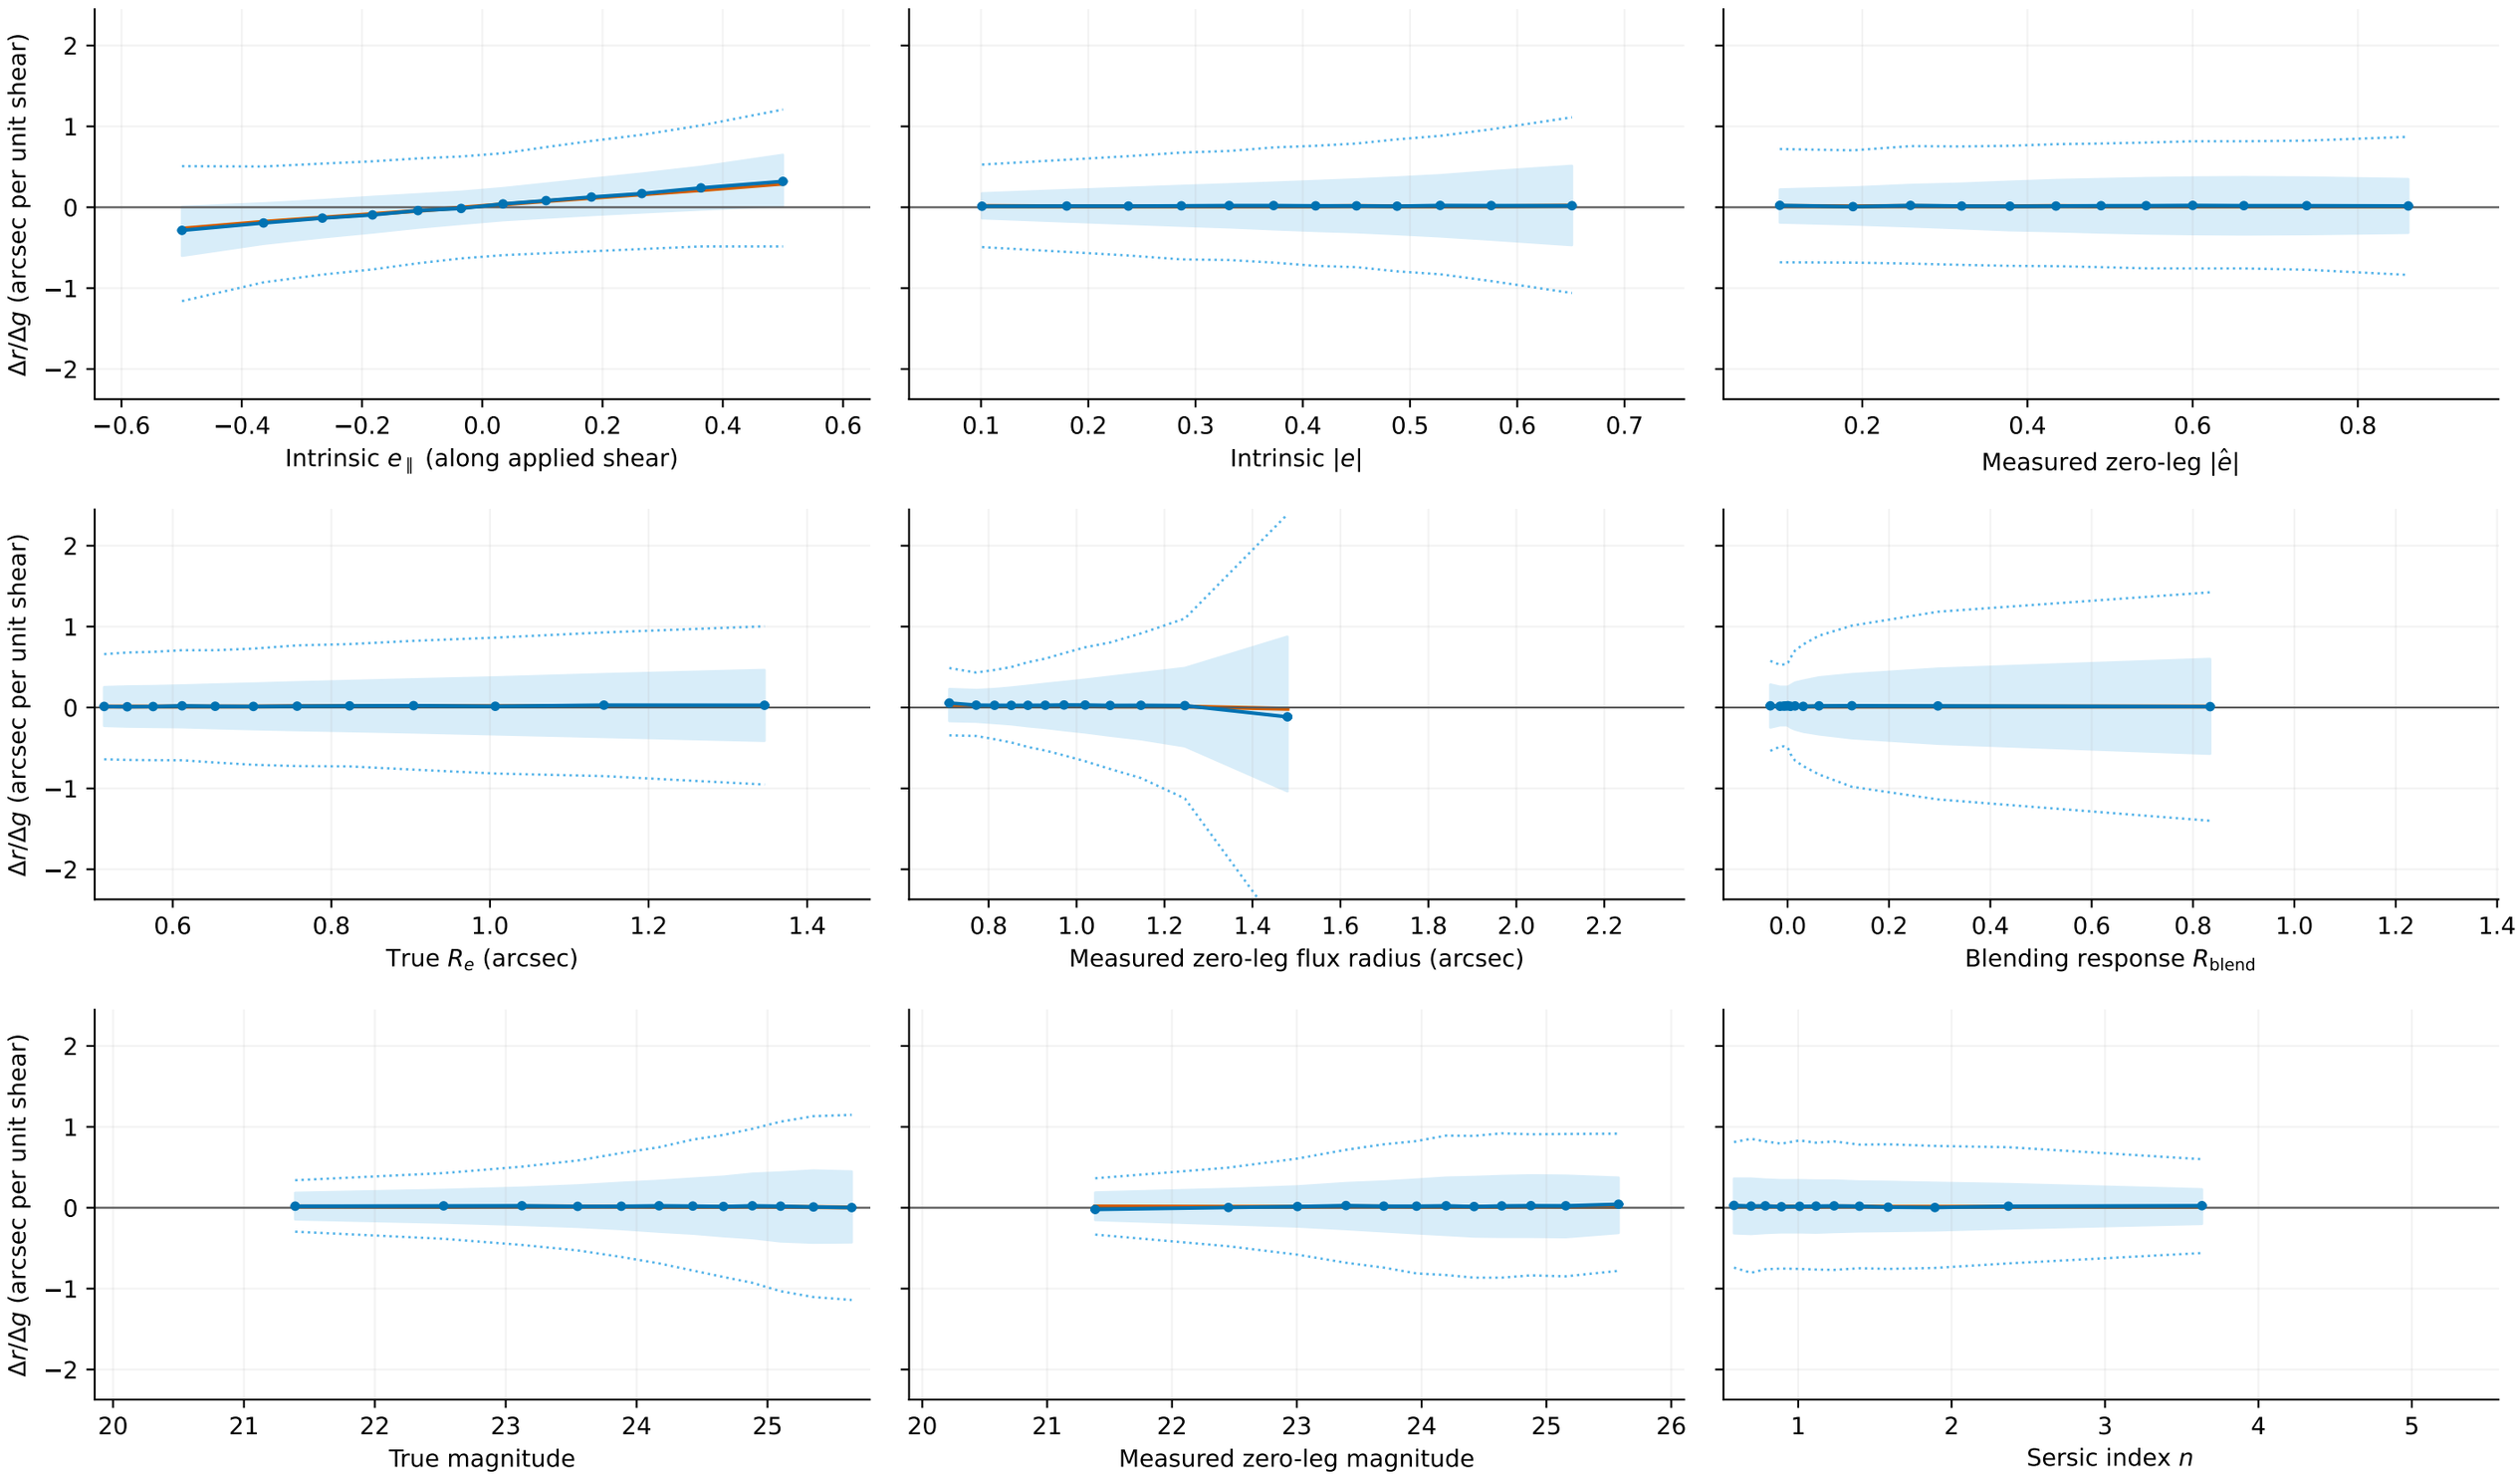
Measured per-pair flux-radius response

16–84% of pairs
5–95% of pairs
Median
Mean ± case-bootstrap SE



1,120,160 matched galaxies; 40 held-out cases; true Re > 0.5 arcsec; detected and usable in both legs; no measured selection cuts.
Forward 0 → 0.05 along each pair's applied shear direction. 12 quantile bins; all finite values enter statistics.
Shading shows per-pair scatter, not uncertainty of the mean. Axes zoom to central values; full tails are retained in the saved table.
