$R_\theta = \Delta\theta/0.05$
$\theta = \ln r$
$\theta = m$
True magnitude (mag)
True effective radius (arcsec)
Intrinsic ellipticity |e|
638,884 matched galaxies; 40 held-out cases; seed-501 flows; 64 CRN draws. Bars: case-bootstrap 1 SE.
Forward 0 to 0.05 on both sides; primary-only model shear; both-detected population; no measured cuts.
